*Marketing is not something you do to people, it's something you do for people.
Marketing is the service of helping people make the best possible decision.*

G. Silverman

*To see things in the seed,
that is genius.* Lao Tzu

How you manage your electrical network and account is your business but, with the ever increasing cost of electrical energy, it may also be the one area of your business where you can save money.

Your electrical network is the platform on which your company operates.

Is your network safe and does it comply to legal requirements?

Is it reliable?

To see things in the seed...

*You don't get paid for the hour,
you get paid for the value you bring to the hour.*

Jim Rohn

Add value...

**Support systems and equipment such as emergency generators and UPS units –
Are these expensive systems fully integrated into your network?**

Return on investment –

**In your hour of crisis when power failures hit hard, are these systems adding value
to the hour?**

*The best way to have a good idea
is to have lots of ideas.* **L. Pauling**

To meter is to know...

The only way to have a good idea how your electrical network performs, is to monitor the network with strategically placed metering devices.

A Metering platform will help you make informed decisions, diagnose and troubleshoot and manage energy consumption, among others.

*Inventing is a combination of brains and materials.
The more brains you use, the less material you need.*
Charles F. Kettering

Sometimes one does need to re-invent the wheel.

Today's technology is developed for many good reasons.

Remember the olden days with long queues in the banks, no internet banking or ATMs?

Is today's technology working your electrical network, or are you queuing to operate and monitor your systems by hand?
